

FAASTeam presents:

# **Application of Weather Forecast Tools to Planning a Winter Cross Country Flight**

Rhon Williams will show how flight planning for a long cross-country flight during winter weather requires multiple weather planning tools to make good decisions before and during flight. With many winter storms and likely icing, timing is critical.

This presentation will describe the weather forecast tools used for an actual flight during challenging real winter conditions. It includes views of various forecast tools, how they are used, their strengths and their limitations. Pilots will learn techniques for planning during difficult winter weather, and will learn how aviation weather forecasts are applied in real decision making.

**Directions:** From Alondra Blvd, turn north through fence across from Dwight Ave, Immediately inside fence, turn left along the fence, to the EAA Chapter 96 hangar.

Prior to attending a safety seminar, please review and abide by current CDC, State and Local health guidelines.
